Fluid Collection System

BF457

CE

The Fluid Collection System includes a flexible drape support and fluid collection bag. The flexible drape support device quickly attaches to the end of the table seat section during set up, and is easily manipulated intra-procedurally to obtain maximum unobstructed surgical site access. Both the Sterile and Non-sterile Fluid Collector Bags fit either the Standard or Bariatric model drape support. The built-in flexible drain hose works with a kick bucket or a suction canister.

Set of 10 Fluid Collection Bags: Sterile (BF458) or Non-Sterile (BF459) must be ordered.
