STERIS Orthopedic Extension

BF821

CE

The STERIS Orthopedic Extension (BF821) is an alternative to a dedicated orthopedic fracture table. This table extension provides support when the current case load may not warrant a dedicated table, budget restraints are a concern, or when considering a supplemental or secondary fracture table.

The Orthopedic Extension fits all STERIS general surgical table platforms and serves the full range of traditional orthopedic procedures. The radiolucent carbon fiber abductor bars provide unobstructed imaging capabilities and versatile positioning of the patient's lower extremities. The mobile stainless steel accessory cart offers ample storage space for orthopedic accessories and is a convenient platform for docking, undocking, and storing the abductor bars.

All Orthopedic Extension Accessory Packages include:

Orthopedic Extension Abductor Bar Assembly (BF00256 or BF823)

Accessory Cart (BF24)

Adult Wedge-shaped Sacral Rest with Pad (BF00066)
