Secure-Release™ Clamp US

BF861

The Secure-Release™ Clamp completely revolutionizes accessory attachment. Confidently attach and detach the all-new rail clamp using the button located on the top of the clamp. The new button design prevents false rail attachment as the button will not disengage unless properly installed on the siderail. Additionally, a callout for the “Top” of the clamp has been laser-engraved onto the device to prevent confusion and reverse installation. Once the clamp is secured to the siderail, and an accessory has been inserted, screw the locking knob tight to the siderail to ensure secure attachment.

COMPATIBLE WITH

5085 SRT - 4095 - 5095 - 7080
